WG Home Energy Savings Program: Maryland Home Heating Equipment

SAVE UP TO \$800 WITH WASHINGTON GAS REBATES

Reduce energy costs and make your home more comfortable by installing an energy-efficient gas boiler or furnace. ENERGY STAR® certified heating equipment can help you save between 10% and 30% a year on your utility bills.

Why Switch to Energy-Efficient Heating Equipment?

Heating accounts for about 45% of a home's energy bills and is the single-highest energy user in many homes.* A properly installed and maintained ENERGY STAR certified boiler or furnace can last 18 years, consistently helping you lower energy use and save money over its lifetime.

Energy-efficient boilers use about 5% less energy than standard models. Energy-efficient furnaces are about 15% more efficient. Here's how:

- Electronic ignition eliminates the need for a pilot light to burn all the time.
- New combustion technologies extract more heat from the same amount of fuel.
- Sealed combustion uses outside air to fuel the burner, reducing drafts and improving safety.

If every gas furnace sold in the United States met current ENERGY STAR requirements, annual greenhouse gas emissions would be reduced by the equivalent of emissions from 177,000 cars.[†]

Save More on Home Heating

To help you reduce your energy use and utility bills, Washington Gas offers money back on high-efficiency boilers, furnaces, combination home and water heating units, and home heating tune-up services.

ELIGIBLE EQUIPMENT	ITEM & EFFICIENCY REQUIREMENT	REBATE	MAY BE ELIGIBLE FOR FEDERAL TAX REBATE
Furnace Tier 1	ENERGY STAR certified and minimum 95.1% AFUE	\$450	✓
Furnace Tier 2	ENERGY STAR certified and minimum 97% AFUE [†]	\$600	✓
Boiler Tier 1	ENERGY STAR certified and minimum 90% AFUE	\$475	
Boiler Tier 2	ENERGY STAR certified and minimum 95% AFUE	\$775	✓
Combination Home and Water Heating Units	Minimum 90% AFUE and/or minimum 0.87 UEF	\$800	✓
Boiler/Furnace Tune-Up‡	Service provided by Home Energy Savings Contractor	\$100	

^{*} Federal tax credits may require exceeding efficiency requirements above. Check eligibility requirements at energystar.gov/taxcredits.

Get up to \$800 in rebates in just three steps:

- 1. Find a participating contractor at WGSmartSavings.com/Contractor.
- 2. Have your participating contractor install the qualifying high-efficiency heating equipment and/or home heating tune-up services.
- 3. Your participating contractor will submit a rebate application on your behalf.
